SweetPro® 16

SweetPro® 16 tubs are designed for essential fortification of Stocker Cattle, Yearling Cattle, and Cow requirements for vitamins A, D & E, plus protein, calcium, phosphorus and trace elements including selenium. SweetPro® 16 should be used for cattle on good to average forages. Daily intake will vary depending on forage quality and nutritional needs.

Feeding Instructions:

1. Before feeding SweetPro® 16 tubs for the first time, animals should be well fed.
2. Provide access for animals to have plenty of clean fresh water at all times.
3. Provide an adequate source of good quality roughage and forage at all times (all they can consume).
4. Have one lick tub available per 25 head of beef or dairy cattle.
5. Place tubs near water sources or areas cattle frequent regularly.
6. Make tubs available in more than one location in large pastures or where more than one water source is available.
7. Other salt and minerals may be provided free choice to balance specific needs.
8. A two week adaptation period will be required to establish a base consumption rate. After adaptation period, recommended range of intake is .75 to 1.25 lbs./hd/ day.
9. Once animals consistently consume more than 1.25 lbs./hd/day, transition to SweetPro® FiberMate 18. If daily consumption is consistently below .75 lbs./hd/day, transition to SweetPro® Cattle Kandi.

The above feeding directions are general guidelines and will vary with the overall feeding conditions. Always use good management practices.

Caution!

Contains 600 ppm copper. **DO NOT FEED TO SHEEP!**
Do not use in association with another feed containing supplemental selenium.
